

Next Generation IP Networks

Whether it is a Metro-E, statewide or worldwide transport network, FARR Technologies has the experiences to not only design your network but also install, provision and train your staff.

FARR Technologies will assist with your ongoing trouble shooting and the maintenance of your network. FARR Technologies commits the same resources to all its clients weather your network is large or small.

We have the resources to augment your staff and support them during a new build so they can continue to support your customers.

When it comes to IPv6 it is not IF but WHEN. With the explosive growth of mobile, gaming and other devices that need IP address to communicate, it is becoming more difficult to obtain IPv4 address.

This should not be an issue, with the continued upgrades taking place in the network, as more devices become IPv6 aware, FARR Technologies will show you how these changes affect your business and prepare your IP network for the future.

FARR Technologies can assist you with all your needs.
