

NEXT GENERATION NETWORK SERVICES

No matter if it is a campus, gated community, apartment complex, metro or statewide network, FARR Technologies has the experience to design, install, and integrate your network equipment.

FARR Technologies has experience with the latest generation of network protocols and technologies such as Software Defined Networking (SDN).

FARR Technologies has the team to assist with the initial integration, ongoing troubleshooting, and the maintenance of your network. FARR Technologies commits the same resources to all its clients whether your network is large or small.

We have the resources to augment your staff and support them during a new network deployment so they can continue to support your customers.

When it comes to IPv6, it is not IF but WHEN. With the explosive growth of mobile, gaming, smart home, and other devices which require IP addresses to communicate, it has become difficult and expensive to obtain IPv4 address.

This should not be another concern for your team, with the continued upgrades taking place in the network, as more devices become IPv6 aware, FARR Technologies will show you how these changes affect your business and prepare network and your team for the future.

FARR Technologies can assist you with all your Networking needs!
